Register Number			

2017 GEOLOGY (Degree Standard)

Time Allowed: 3 Hours

[Maximum Marks: 300

CEOHC/17

Read the following instructions carefully before you begin to answer the questions.

IMPORTANT INSTRUCTIONS

- 1. The applicant will be supplied with Question Booklet 10 minutes before commencement of the examination.
- 2. This Question Booklet contains 200 questions. Prior to attempting to answer the candidates are requested to check whether all the questions are there and ensure there are no blank pages in the question booklet. In case any defect in the Question Paper is noticed it shall be reported to the Invigilator within first 10 minutes and get it replaced with a complete Question Booklet. If any defect is noticed in the Question Booklet after the commencement of examination it will not be replaced.
- 3. Answer all questions. All questions carry equal marks.
- 4. You must write your Register Number in the space provided on the top right side of this page. Do not write anything else on the Question Booklet.
- 5. An answer sheet will be supplied to you, separately by the Invigilator to mark the answers.
- 6. You will also encode your Register Number, Subject Code, Question Booklet Sl. No. etc. with Blue or Black ink Ball point pen in the space provided on the side 2 of the Answer Sheet. If you do not encode properly or fail to encode the above information, action will be taken as per commission's notification.
- 7. Each question comprises four responses (A), (B), (C) and (D). You are to select ONLY ONE correct response and mark in your Answer Sheet. In case you feel that there are more than one correct response, mark the response which you consider the best. In any case, choose ONLY ONE response for each question. Your total marks will depend on the number of correct responses marked by you in the Answer Sheet.
- 8. In the Answer Sheet there are four circles (A), (B), (C) and (D) against each question. To answer the questions you are to mark with Ball point pen ONLY ONE circle of your choice for each question. Select one response for each question in the Question Booklet and mark in the Answer Sheet. If you mark more than one answer for one question, the answer will be treated as wrong. e.g. If for any item, (B) is the correct answer, you have to mark as follows:

- 9. You should not remove or tear off any sheet from this Question Booklet. You are not allowed to take this Question Booklet and the Answer Sheet out of the Examination Hall during the examination.

 After the examination is concluded, you must hand over your Answer Sheet to the Invigilator. You are allowed to take the Question Booklet with you only after the Examination is over.
- 10. The sheet before the last page of the Question Booklet can be used for Rough Work.
- 11. Do not tick-mark or mark the answers in the Question Booklet.
- 12. Failure to comply with any of the above instructions will render you liable to such action or penalty as the Commission may decide at their discretion.

- Bauxite

95. Match the following:

Diagnostic colour Mineral or Metal Black 1. (a) Copper Green and Blue 2. (b) Nickel Green Molybdenum 3. (c) **Bright Yellow** (d) Manganese 4. (b) (c) (d) (a) 2 3 (A) 2 4 3 **(B)** 2 3 1

2

1

96. _____ are those whose existence is considered probable after a certain amount of prospecting work and geological observations.

(D)

Probables reserves

- (B) Possible reserves
- (C) Assured reserves
- (D) Inferred reserves

97.	A st	rato-volcano exhibits rough strati	fication pro	duced by		
	(A)	Pyroclastic material				
	(B)	Alternate sheets of lava			•	
	(C)	Dykes			·	
	9	Alternate sheet of lava and pyr	oclastic ma	terial		
				•		-
98.	In th	ne deltaic feature, the fore-set bed	s have —	- inclination.		
٠.	(A)	horizontal				
	(B)	gentle slope				
	6	steep inclination				
	(D)	gentle inclination toward seawa	ard			
•						
99.	A ve	ery deep valley, developed in I	imestone	rocks formed by th	e solution	,
		nown as	amestone	rocks, formed by th	e solution	processes,
	(A)	Blind valley		Karst valley		
	(C)	Swallow holes	(D)	Polje		
		•				
100.	The	channels of many meandering str	eams are bo	ordered by		
•	(A)	Flood plains	(B)	Braided streams		
	V	Natural levees	(D)	Point bars	•	
	*		•			
101.	The	volcanoes that are built up from a	alternate la	vers of lava and ash	but besides	the main
(4)		er, it has many craters on the slop				, , , , , , , , , , , , , , , , , , , ,
	(A)	Ash-cinder volcano	T)	Strato-volcano		
	(C)	Fissure-volcano	(D)	Caldera-volcano	•	
		•				•
l02.		complex of geomorphic processes		s which operate und	er a particı	ılar set of
	(A)	Landforms	(B)	Simple landssense		-
	(C)	Morphogenetic system	. ,	Simple landscapes		•
		morphogenesic system	(D)	Compound landscap	es	

103.	_	g scoop-shaped hollows of sand with e gentler than leeward are known as	_	apering to windward and with a windwa	iro
	(A)	Transverse	(D)	Parabolic dunes	
	(C)	Longitudinal dune	(D)	Sand levees	
		•			
104.		frost-shivered fragments fall to low is are called	er levels	s of mountains and accumulate as angu	laı
	(A)	Talus	D	Screes	
	(C)	Humus	(D)	Hard-pan	
105.	Evid	ence from the salinity of the oceans: 1500 my		that the age of the oceans must be atleas	t
	(C)		(B)	1600 my	
	(C)	1700 my	(D)	1800 my	
106.	Wha	t is the primary effect of attrition by	wind?		
	(A)	change in shape	W)	reduction in size	
	(C)	reduction of wind velocity	(D)	reduction of distance of transport	
=					
107.		rtain constant fraction of any sampl '. This law of radioactive disintegrat		oactive element undergoes change in a u framed by	nit
	(A)	Laplace	(B)	Q.J. Schmidt	
	(C)	Marie curie	· · · ·	Rutherford	
	·				
108.		n two Lithospheric plates are movir wsurfaces, this margin of the plate i		from each other, inducing the development ied as,	nt
	(A)	Destructive margin	(B)	Conservative margin	
	0	Constructive margin	(D)	Neutral margin	
	. •				
109.	The	sulphorous gases that escape from t	ne fumer	oles are called as,	
	(A)	Saffoni	(B)	Mofettes	v
	(C)	Travertine		Salfataras	

110.	Ptilo	phyllum is an index fossils of						
	(A)	Jurassic	(B)	Triassic				
	C	UP. Gondwana	(D)	L. Gondwana				
			•					
111.	TInne	er Gondwana beds of Trichirapalli co	ntains					
. 111.	Oppe	Micaceous shale and clay	(B)	Fossiferous limesto	ne			
	((1)	Conglomerate	(D)	Dolomite				
	(C)	Conglomerate	(D)	Dolomic				
112.	Find	out the correct stratigraphic sequence			•			
	(A)	Patcham series, Umia series, Katro		•	v			
	(B)	(B) Umia series, Katrol series, Chari series, Patcham series						
	YOU	Patcham series, Chari series, Katr	ol series,	Umia series	*			
	(D)	Katrol series, Patcham series, Cha	ri serìes,	, Umia series				
	· .							
113.	Find	out the youngest stage of cretaceous	success	ion in Trichirapalli				
110.	(A)	Uttatur	(B)	Trichirapalli				
	(21) -(21)	Niniyur	(D)	Ariyalur				
		Tviniy di	(-)					
				· · ·				
114.	Age	of Satyavedu conglomerate is						
	(A)	Cretaceous	(B)	Jurassic				
	101	Upper Gondwana	(D)	Lower Gondwana				
				•	•			
115.	The	famous kolar gold mines of India are	located	which one rocks?				
	(A)	Cuddapah	TO !	Archean				
	(C)	Vindhyan	(D)	Gondwana				
	(0)	, , , , , , , , , , , , , , , , , , ,						
-				1	ed adopted in historics			
116.		efinite system of time-units and rock- ogy. To find out which one is correct	units na	s been established at	iu auapteu iii instorica			
٠	- Scor	Epoch-Series	(B)	Era-System				
	400	Epoch-Series	(D)	Period-Stage				

117.	The r	ratio between the density of a mineral to that of water at 4° Celsius is known as
	(A)	Hardness
	D)	Specific gravity
	(C)	Tenacity
	(D)	Surface tension
·.		
118.	The a	angle of inclination of the fold axis from the horizontal is called as
	(A)	Interfacial angle Plunge
	(C)	Monocline fold (D) Over fold
119.	Tho 1	hanging wall in a vertical section at right angles to the strike of the fault, appears to
113.		gone down relative to the foot wall, then the fault is
	(A)	Apparent overthrust fault
	(B)	Apparent reverse fault
	(C)	Apparent thrust fault
	0	Apparent normal fault
120.	The	Chamundi granite is the best example for
		Sheet joints (B) Mural joints
	(C)	Master joints (D) Shear joints
101	//VIL _	anticlines become charmer with donth but broader and more open unward. Conversely
121.		anticlines become sharper with depth, but broader and more open upward. Conversely, synclines becomes broader with depth, but sharper upward, then the fold is called
	(A)	Similar Concentric
٠.	(C)	Piercing (D) Plunging
122.	With	in the elastic limit, what is the relation of stress and strain?
124.	VV 101	Strain is proportional to stress
	(B)	Stress is inversely proportional to strain
	(D) (C)	Stress is less than strain
	(D)	Stress is greater than strain
	$\langle D \rangle$	Parodo in Brogger arrain

123.		ock with upper triassic fossils is direct though the strata may appear to be co		rlain by rocks with lower cretaceous fossils, able, then it is
	(A) [.]	Fold	(B)	Fault
	0	Unconformity	(D)	Joint
124.	A for		expos	ed in artificial openings such as quarries is
	(A)	Exfoliation	D	Sheeting
	(C)	Tension joints	(D)	Release joints
		•		
125.	The a	angle between the fault plane and a ve	rtical p	plane that strikes parallel to the fault is the
	(A)	Dip	(B)	Strike
	(C)	Slip	D	Hade
	` '			
126.	A loc	al unconformity is similar to a		
120.	(A)	Angular unconformity	O	Disconformity
	(C)	Non-conformity	(D)	Angular non-conformity
	(0)	11011 001122111105	(-)	
127.	The	apparent dip value will be always ——		to the true dip.
121.	(A)	equal	· •	less
	(C)	greater	(D)	vertical
	(0)	ground.	(2)	
100	mh .	surface indicating a hiatus in a norma	l ondon	of acquence then it is called as
128.	(A)	Conformable series	Order	Unconformity
	,(八) (C)	Horst	(D)	Over thrust
	(0)	110150	(D)	Over unitast
129.		mplete skeleton of single theca of a	a solit	ary coral or united thecae of a colony is
	4	Corallum	(B)	Septa
	(C)	Scelerosepta	(D)	Basal Plate

130.	Fora	miniferal tests range in size			
	(A)	From 0.1 to 1.0 mm	T)	From 0.01 to 19.0 mm	
	(C)	From 1.0 to 10.0 mm	(D)	From 1.0 to 10.0 cm	
	•				
131.	Mega	alospheric tests consists			
,	(A)	Smaller shell and large proloculus			
	(B)	Large shell and large proloculus			
	(C)	Large shell and small proloculus			
	(D)	Small shell and small proloculus			
132.	Age	of Terebratulina is			
	4	Jurassic to present day	(B)	Carboniferous to present	٠
	(C)	Cambrian-recent	(D)	Triassic-present	
133.	Whic	ch one is megascopic foraminifera fossi	1?		
	44	Nummulite	(B)	Globigerina	
	(C)	Orbulina	(D)	Rotalia	
134.	The	oculogenetal system of Echinoid cons	ists of	number of ocular plate and	d
٠,		number of genetal plate.	•		
	(11)	5 and 5	(B)	3 and 4	
	(C)	3 and 3	(D)	4 and 3	
•					
135.	Hear	rt shaped echinoid is	٠		
	(A)	Holectypus	(B)	Conulus	
	(C)	Pygaster	0)	Micraster	
	•		•		
136.	Node	o saria is a			
100.	(A)	Ostracoda	(B)	Mollusca	
	(C)	Trilobita	T.	Foramini fera	
•			•		

137.	For t	the forms that come under no	rmal class	of He	exagonal syste	m will hav	е	
	(A)	6 Horizontal planes						
	B	6 Vertical planes						
	(C)	4 Inclined planes						•
	(D)	4 Vertical planes					Ž.	
				• .				
138.	In m	nonoclinic system, the acute	angle bety	veen t	the axes "a" a	nd "c" is a	represented	l by the
	(A)	α		0	β			
	(C)	γ	•	(D)	heta			
	•						•	٠
139.	The	contact-goniometer consists o	of a card o	n whic	ch is printed a	semi-circ	ular are gr	aduated
	to				; ¯			
	(2.1)	$\frac{1}{2}$ degrees		(B)	$\frac{1}{4}$ degrees			
	(C)	$\frac{1}{2}$ degrees $\frac{3}{4}$ degrees		(D)	One degrees	•	÷	
								*
140.		ineral showing no external fored as,	orm, but h	naving	a definite in	ternal mol	ecular stru	icture is
	(A)	Massine		(0)	Crystalline		·	
	(C)	Amorphous		(D)	Isomorphous	3	-	
٠.								
141.	This	mineral is having two sets of	f polysynth	netic t	winning	-		
	(A)	Albite		(B)	Pericline			
	10	Microcline		(D)	Sphalerite		•	
		•			•			
142.	Nam	e the crystallographic system	a where a	$\neq b \neq c$	and $\alpha = \beta = \gamma$	⁄ ≡ 90°		
	(A)	Tetragonal		(B)	Rhombohedr	al		
	(0)	Orthorhombic		(D)	Triclinic			
	•		÷					

	٠						•
143.	With	few exceptions, the t	wins of t	he normal clas	s of isometric sy	stem will b	e of
	(1)	Contact twins				•	
	(B)	Penetration twins					
•	(C)	Repeated twins					· ·
	(D)	Polysynthetic twins	3	•			
144.	The t	type mineral of the no	ormal cla	ss of the hexag	onal system is		•
,	(A)	Calcite		(B)	Tourmalines		•
	(C)	Corundum			Beryl	- -	
<u>-</u>		Corumani			200,0		
145.	Mata	ch the following :					
140.	Man	System		Axial Ratio	•		
		•					
. •	(a)	Isometric	1.	$a_1 = a_2 \neq c$

(A) Albite

(B) Axinite

Orthoclase

(D) Rhodonite

147.	When light passes from one medium to another medium, there is a generally a decrease (or increase in velocity, which is known as								
	(4)	Refraction	(B)	Reflection	•				
	(C)	Double refraction	(D)	Isotropism					
148.		lored mineral, which shows a change i rised light, is referred as,	in the	intensity of color, du	ring rotation in plane				
	(A)	Isotropic	(B)	Anisotropic					
	(C)	Mono chromatic	•	Pleochroic					
149.	I	As the objective lens is raised the refractive index.	Becke	line moves into the	e substance of highe				
	II.	As the microscope stage is raised th refractive index	e Becl	ce line moves into th	e substance of highe				
	(A)	Statement I and II are correct							
	(B)	Statement I and II are incorrect	-						
	(C)	Statement I is correct and II is incor	rect						
	(D)	Statement I is incorrect and II is corr	rect						
150.	Dolo	omite crystallizes under							
	(A)	Monoclinic system	(B)	Triclinic system					
	(C)	Cubic system	D	Hexagonal system					
151 .	Garr	net minerals crystallize under							
	(A)	Monoclinic system	(B)	Triclinic system					
	40	Cubic system	(D)	Orthorhombic syste	m				
152.	Perc	ussion figure is produced in the minera	ıl						
	(A)	Amphibole	40)	Mica					
	(C)	Pyroxene	(D)	Quartz					

- A process of emission of light at the same time as the irradiation is called 153. Phosphorescence (A) Fluorescence Incandescence (C) (D) Luminescence The following mineral is having adamantine luster. **154**. Cassiterite **(B)** Stilbite Albite (C) Heulandite (D) 'Pyro electric' minerals develop an electric charge when subjected to a change in stress. 155. I. II. 'Piezo electric' minerals develop an electric charge when subjected to a change in temperature Statement I and II are correct (A) Statement I is correct and II is incorrect **(B)** Statement I and II are incorrect Statement I is incorrect and II is correct (D) The property of a mineral, to display play of color due to the interference of rays of light either by minute globules of water trapped in the crystal lattice (or) by distortion in the atomic lattice, is known as, Pleochroism (A)
 - (D) Opalescence

Schiller

Iridescence

(B)

157.	When	n Nepheline replaces the feldspar in q	uartz g	abbro, the rock	approaches to
	(A)	Norite	T	Essexite	
	(C)	Pyroxenite	(D)	Monzonite	
158.	The 1	ratio of FeO to Fe ₂ O ₃ is ———————————————————————————————————	i	n the ropy lava.	•
	NA	greater	(B)	smaller	,
	(C)	equal	(D)	constant	
			•		
159.	The	mineralogical composition of norite is			
	(A)	Anorthite and Clinopyroxene	,		
	(B)	Anorthite and Orthopyroxene			
	(0)	1 Labrodorite and Orthopyroxene			
	(D)	Labrodorite and Clinopyroxene			
160.		<u> </u>	and —	· .	— are mafic minerals.
•	(A)	Biotite, Hypersthene, Leucite			
	0	Biotite, Hypersthene, olivine			
	(C)	Biotite, Hornblende, Orthoclase			
	(D)	Biotite, Hornblende, Analcite			
161.			- and –	·	— are salic minerals
	(A)	Quartz, Albite, Apatite		· ·	•
	(B)	Quartz, Albite, Hypersthene			
	40	Quartz, Albite, Zircon			
	(D)	Quartz, Albite, Acmite			

102.		orthoclase	or the composit	non of andesite, quartz, no	rnbiende, blouw
	.43	Tonalitis	(B)	Gabbros	
	(Č)	Granodiorite	(D)	Granite	•
163.	The	volcanic rock which is the eq	uivalent of mo	nzonite , carrying alkali-fel	ldspar and soda
	lime	feldspar in approximately eq	ual amounts is	called	
	(A)	Trachyte		Trachyandesite	
	(C)	Andesite	(D)	Dacite	
164.	Fast	cooling and high viscosity fav	our the format	ion of	
	(A)	bigger crystals	(B)	smaller crystals	
	40	glass	(D)	both (A) and (B)	•
`		·			
165.	The t	transformation of glass to cry	stalline matter	is called	
. ,	(A)	crystallisation			
	0	devitrification			
	(C)	recrystallisation			
	(D)	felsitisation			
166.	The 1	rock which more often forms	glassy form is		
	(A)	Andesite		Rhyolite	
	(C)	Basalt	(D)	Trachyte	,
167.	Text	ures in igneous rock is define	d ac		
101.	(A)	size and shape of the grains	•		•
	(21)	mutual relation of mineral	•	ter	
	(C)	ratio between exectallized			ų.

the fabric
